

Thank You for Recycling with EPC

Most electronics are 100% recyclable. Common materials that are recovered through our electronics recycling process include glass, copper, aluminum, tin, steel, iron, plastic, silver, platinum, and gold. In addition to these reusable materials, there are also many harmful and highly toxic substances that are found in everyday electronics such as lead, mercury, beryllium, lithium, cadmium, BRFs, PCBs, and PVC. All materials processed by EPC are segregated and de-manufactured, with all harvested raw materials directed to "downstream" vendors for use in new, finished goods. All EPC recycling processes adhere to the BAN (Basel Action Network) E-Steward guidelines for environmentally sound recycling practices.

EPC strives for ZERO WASTE production each and every day, and we currently have the ability to recycle 99% of all of the materials that come through our facility.

EPC reserves the right to resell, or donate to charity, any equipment received to help offset the expense of our recycling processes.

ALL DATA inside any device capable of holding information will be destroyed. EPC destroys data in compliance to NIST standards to ensure the protection of all business and personal data.

Electronics We Accept Free of Charge:

Servers
Desktop PCs
Laptops
Tablets
Speakers
All Components & Accessories
